Phone: 306-5681

Date: 8-14-02

Please search the following as soon as possible for application with serial number 10/003,759

SEQ ID NO: 1, SEQ ID NO:3 and nucleotides 52-783 of SEQ ID NO:3 against all commercial nucleic acid databases including issued patents database and pending application database and provide a print of all results.

SEQ ID NO: 2 and amino acids 40-261 of SEQ ID NO:2 against all commercial protein databases including issued patents database and pending application database and provide a print of all results.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao, Ph.D. Bi technology Patent Examiner Art Unit 1652, Room 10A11 Crystal Mall 1, USPTO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acyl-CoA dehydrogenase; aldehyde dehydrogenase; amidase; dihydroxy-acid dehydratase; DNA polymerase III beta chain; export protein; gntR-famly transcriptional regulator; lacI-family transcriptional regulator; marR-family transcriptional regulator; oxidozeductase; reductase; regulatory protein; secreted cellulase precursor; secreted cellulose binding protein; tetR-family transcriptional regulator; transcriptional regulator; xylose repressor; xylulose kinase.
The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS. The length in codons is given for each CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Direct Submission

If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 program of Bibb et ar

                                                                                                                                                                                                                                                                                                                                                                                                               1107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel cellulase isolated from an Actinomycet sp. which can be used in detergent compositions, as animal feeds (to increase nutritional value) and in treatment of textiles (e.g. stone washing or modifying texture, feel and/or appearance of cellulosic fabrics, including removal of 'immature' or 'dead' cotton), pulp (to improve draining) and paper. They may also be used as baking additives, for treating starch (in production of high-fructose corn syrup or ethanol) and for treating grain (to reduce fibre during milling).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim

                                                                                                                                                                                     The invention provides a cellulase from Actinomycetes. The cellula be used in a detergent composition, as an additive for animal feed for the treatment of textiles or pulp and paper. The DNA encoding cellulase can be used to identify homologous cellulases and for recombinant production of cellulases. The present sequence represe

The cellulase to be used in a detergent composition, as an additive for animal feed and for the treatment of textiles or pulp and paper. The DNA encoding the cellulase can be used to identify homologous cellulases and for recombinant production of cellulases. The present sequence represents the DNA sequence of a complete expression cassette consisting of the opposition of cellulases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2000-224344/19.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the BLM (Bleomycin) gene cluster, containing open reading frames (ORFS) 8-30. The proteins encoded by the gene cluster are useful for producing peptides and/or polyketide metabolites, especially bleomycin or bleomycin analogues. They are also useful for chemically modifying biological molecules to produce branched methyl groups, and for coupling amino acids and fatty acids. They may be reacted with an apo-carrier protein and coenzyme A to produce a holo-carrier protein. The BLM gene cluster or catalytic domains can be used individually or collectively to produce thiazolidine, thiazoline, bithiazoline and bithiazoline-containing microbial metabolites. The BLM gene cluster may also be used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 58857 BP; 7256 A; 25139 C; 19353 G; 7109 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention concerns collagen-like polymers having repetitive triads with reduced proline content, and where glycine is the initial amino acids and the subsequent amino acids are varied. The choice of triads utilised in a recombinant collagen-like polymer are chosen in order to affect properties such as helix stability, hydration, solubility, gel point, biodegradation and immunogenicity. Triads of particular interest include GAP, GPA, GPP, GAS, GPG, GPS, GAQ, GSP, GIQ, GPR, GPK, GAR, GER, GDR, GEP, GDA, GAH and GEA. The collagen-like polymers may impart compared to the collagen of being produced in unicellular microorganisms at high mol. wts. and in high efficiency. Plasmid DNA from several colonies were analysed for inserts contg. Complished BNA fragments by digestion with Fokl. The present sequence, was identified to contain the SequenceD gene 1 monomer sequence C2A24C2. The SequenceD collagen-like polymers are used as immunogens for the

                                                                                                                                                                                                                                             The present sequence is a putative coding sequence for the wheat 1-deoxy-D-xylulose 5-phosphate synthase enzyme (DXPS). Its protein is involved in the isoprenoid biosynthesis pathway. The cDNA was identified by sequencing a number of clones and then comparing their protein sequences to known proteins: this showed the sequence's similarity to the Capsicum annuum DXPS sequence. The DXPS gene and protein can be used to create transgent plants which express the gene at either different levels or at different stages of development compared to normal, and to identify herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide encoding 1-deoxy-D-xylulose 5-phosphate synthase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -
                                                                                                                                                                                                        Sequence

The sequences given in AAO43030-34 encode examples of recombinantly produced DCP collagen-like polymers (CLPs) which consist of repeated tripeptide sequences selected from a wide range of GXY sequences, where X and Y can be any amino acid. These sequences can be cloned into plasmids and used to transform E. coll to produce the DCP proteins. DCP peptides comprise repeated units of; A = GARGPAGPP, B = GSRGDPGPP and/or C = GAHGPAGPK. These polymers may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        raise anti-DCP antibodies in rabbits. These polymers have molecular weights of >30 kD and are able to form helices due to interchain linkages. These polymers pref. contain a proportion of tripeptide triad sequences found in natural collagens, pref. mammalian collagens. The CLPs impart unique characteristics to materials such as fibres, membranes, films, coatings, hydrogels, colloid suspensions and moulded
